

Intech INSTRUMENTS LTD

Instrumentation · Monitoring · Control

Welcome to a new edition of Intech's newsletters. This month we feature:

Intech 'DC - Frequency' & 'Frequency - DC' Transmitters.

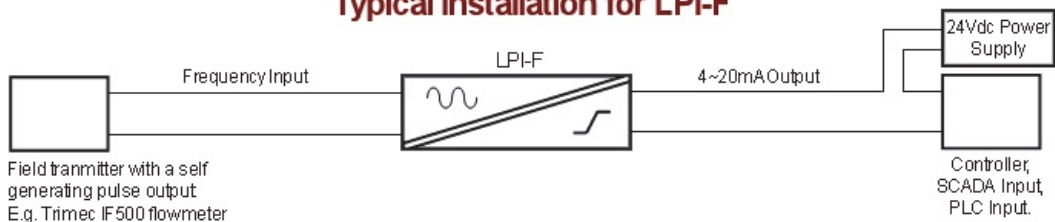

A familiar green box, but not all Intech green boxes are the same!

If you need to interface with frequency or pulse signals, Intech LPI-F & TW series units are the ones to go for:

- Frequency / Pulse to 4-20mA (or visa versa)
- Designed for PLC input signals
- 0.1% accuracy
- LED Indication of loop current

Typical Installation for LPI-F

Field transmitter with a self generating pulse output
E.g. Trimec IF500 flowmeter

More information:

4~20mA Panel Display

If you need to keep an eye on the odd process, simply add the LPI-LCD-6 to your 4~20mA Loop. It's super easy to setup and comes in a rugged IP65 case so you can mount it almost anywhere.

*HONGYI BREWING CONTROLLER

Model C2112

The Hongyi C2112 is a dual-display temperature controller which can display two channels of temperature. It has red LEDs to display the real-time temperature, and green LEDs to display set temperature value.

The unit is fitted with two relay outputs: one for heating and one for cooling control. It has alarms against upper and lower temperature limits, RS485 communication, and a case rating of IP65. The C2112 is applicable to temperature control in the process of chemistry engineering, medicine, wine-making, etc..

PRICE: \$259.00 ex GST.*
