## What's Keeping You Up At Night?

Sometimes life throws you curve ball and since you can't keep your finger on the pulse 24/7 you can end up with many sleepless nights (well, unless you're Superman). Luckily, there is a prescription for many such cases; **real time monitoring by eze**: Easy, reliable, cost effective cloud based monitoring. Accessible anytime, anywhere!

However, if you think a bit of chocolate would also ensure that you get a good nights sleep, then make sure you answer our competition question at the end of the newsletter for your chance to win!

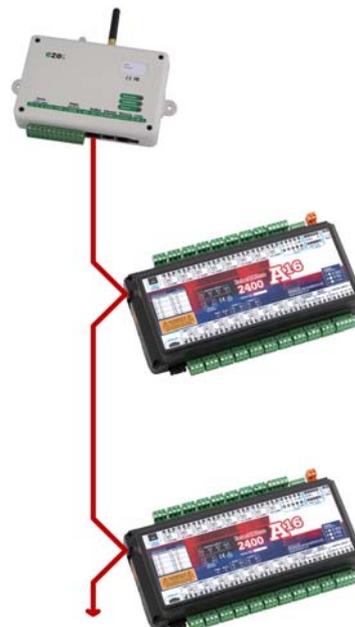

Cloud based monitoring it's now "eze":

### eze System Features:

- From 4 to 40 inputs per ezeio controller.
- From 2 to 80 Relay outputs for control or alarms.
- Alarms: SMS, E-mail, Voice, or relay output.
- View SCADA screens & Visual gauges from anywhere in the world using secure web interface.
- No loss of data during Internet outages.
- All configuration via the web.
- Easy to Install.
- Low Cost.

The **eze** controller is fitted with 4 analogue inputs and 2 relay outputs. Also the controller has an expansion port, which allows for our **2400-A16** stations and **2400-R2** relay expanders to be connected for low cost input/output expansion.

## Chocolate!

To win some delicious chocolate, all you have to do is answer the question below correctly to be in the draw:

**If 50 temperature probes needed to be connected to a eze system, how many eze controllers would be required for the task?**

Email your correct answer to [marketing@intech.co.nz](mailto:marketing@intech.co.nz) for your chance to win!  
Competition entries close on 7th October 2016.

The winners of the competition will be published in the next months Intech Instruments' newsletter.

The "Intech Effect" brings smiles all-round;  
So why not give us a **call**?

Thank you for your time
